SOLUTIONS INNOVATION STAGE

June 25 – 27, 2024 // Novi, Michigan, USA

The Solutions Innovation Stage content is organized around three key themes:

MACHINERY AND PROCESSING TECHNOLOGIES

Machinery and process optimization may boost output for end user markets, but customers need to grasp the benefits amid evolving technology and cost-resource balance.

- *How do machinery and process tech benefit the supply chain?*
- *What's new in end user market innovations?*
- *How does software impact modern optimization?*
- *Can cost-efficient custom production be achieved?*

MATERIALS AND PRODUCTS

Showcasing top products and solutions for end users, OEMs, and tier 1 markets. If your organization serves these markets and offers innovative products that enhance supply chain performance, this theme is ideal for you.

RAW MATERIALS AND ADDITIVES

Presentations cover the latest methods and solutions for improving product properties like flame retardance, durability, and sustainability in the complex raw material sourcing and supply chain. Ideal for chemical and raw material suppliers.
